ENSO Predictability and Dynamics

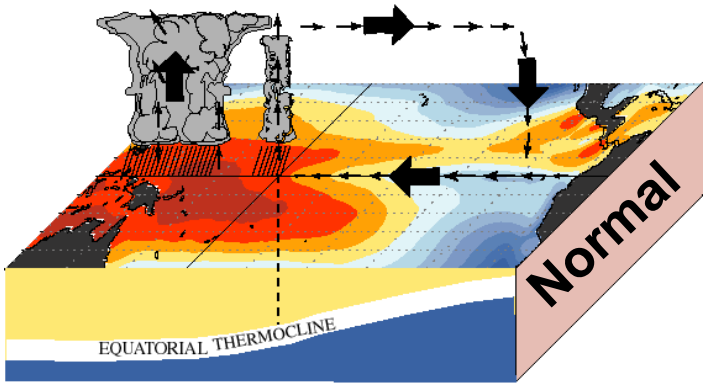
Presented by

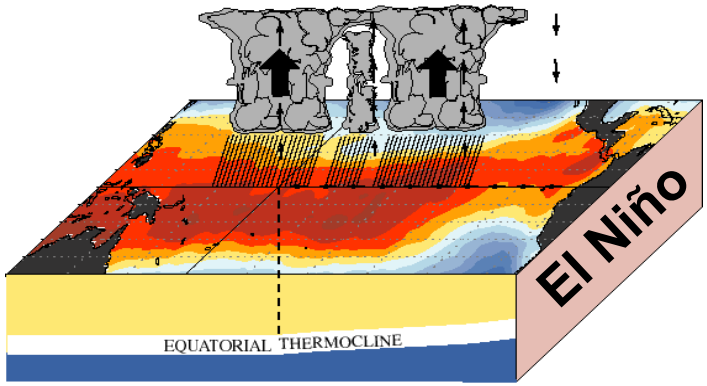
Andrew Wittenberg

Geophysical Fluid Dynamics Laboratory Review

May 20 – May 22, 2014

ENSO: Earth's dominant interannual climate signal





Global Impacts:

- **weather & climate**, natural disasters, transportation
- **ecosystems**, fisheries, agriculture
- **economies:** commerce, energy, water, food, health

How vulnerable are we to future ENSO events?

- **natural vs. anthropogenic risks**
- changes in **dynamics** vs. **impacts**
- short, gappy, nonstationary observing system -> **models crucial**
- coupling & scale interactions -> **key test** for models

GFDL: Strongly positioned in the ENSO community

ENSO simulations among the best in the world

- **realistic** ENSO patterns, mechanisms, teleconnections
- **rich** spectrum of ENSO behavior
- **stable** 4000-year control run
- complementary **assimilation & forecast** systems

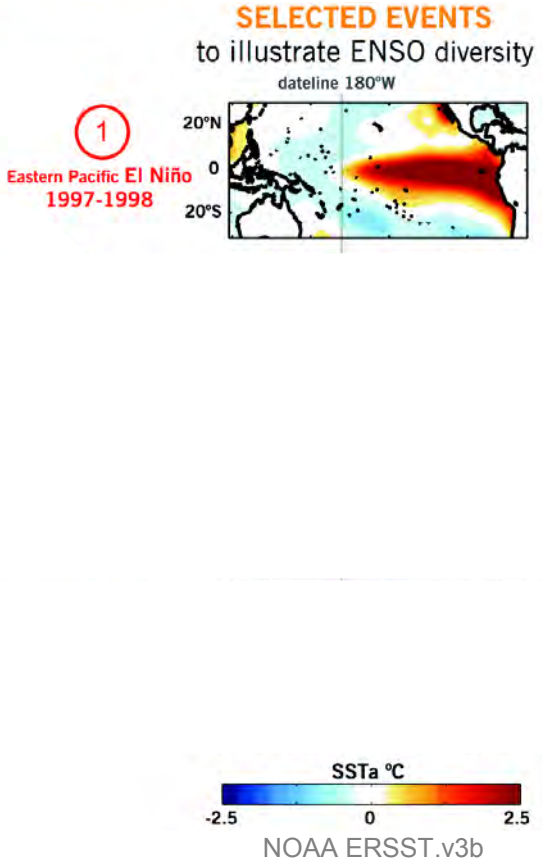
Wittenberg (2009); Vecchi & Wittenberg (2010); Kug et al. (2010); Delworth et al. (2012); Choi et al. (2013); Capotondi & Wittenberg (2013); Wittenberg et al. (2014); Bellenger et al. (2014); Jia et al. (subm); Wittenberg et al. (in prep)

Groundbreaking ENSO research & collaborations

- **diversity, sensitivities,** mechanisms
- **historical & proxy reconstructions**
- **predictability**, forecasts, observing system evaluation
- extratropical impacts, drought, decadal signals
- conceptual models, statistical emulators, community metrics

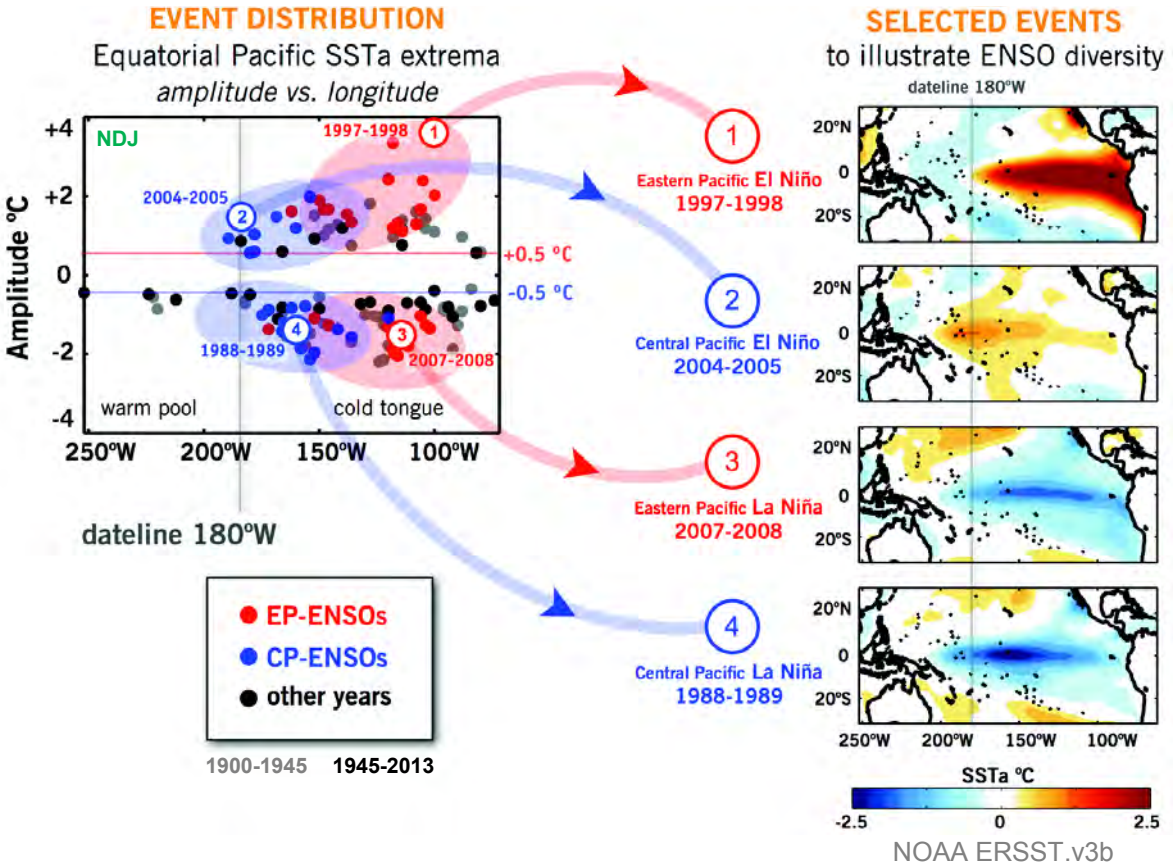
Sample of external collaborations: *Collins et al. (2010); DiNezio et al. (2010, 2011, 2012, 2013); Chen et al. (2011); Guilyardi et al. (2012ab); Watanabe & Wittenberg (2012); Watanabe et al. (2012); Emile-Geay et al. (2013ab); U.S. CLIVAR (2013); Ogata et al. (2013); McGregor et al. (2013); Karamperidou et al. (2014); Graham et al. (2014); Cai et al. (2014); Capotondi et al. (subm); Graham et al. (in prep); Erb et al. (in prep); Chen et al. (in prep); Atwood et al. (in prep)*

ENSO diversity in observations

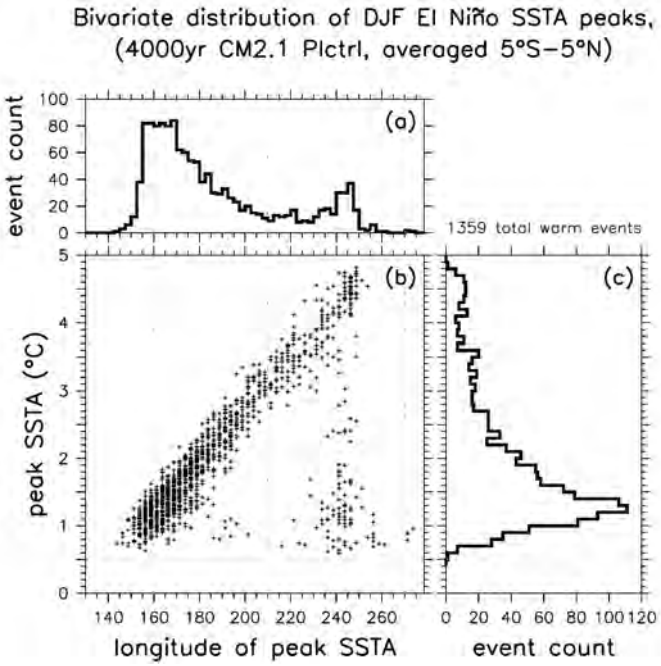


U.S. CLIVAR Working Group on ENSO Diversity: *Capotondi, Wittenberg, et al. (BAMS, subm. 2014)*
Kug et al. (2010); Chen et al. (in prep); Atwood et al. (in prep)

ENSO diversity in observations & models



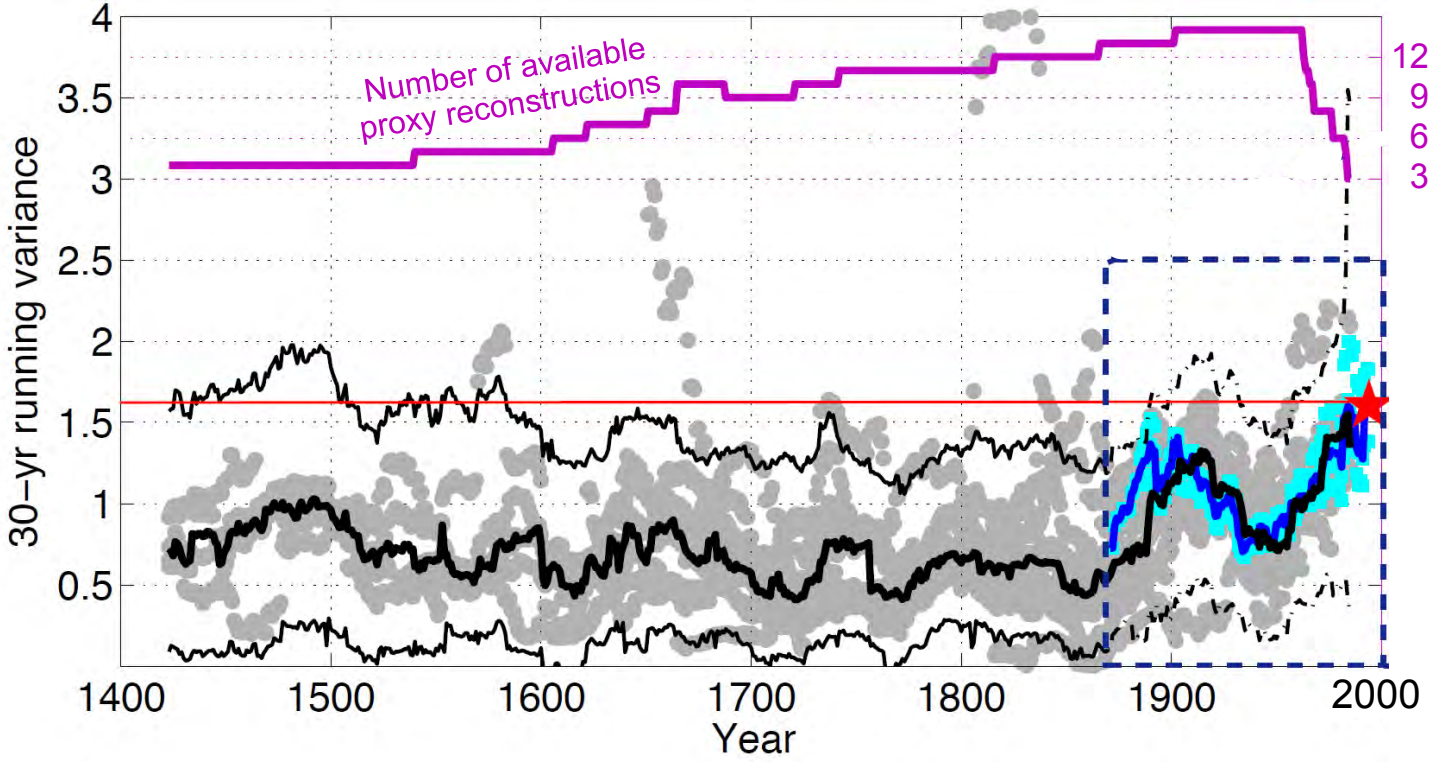
CM2.1 simulation



U.S. CLIVAR Working Group on ENSO Diversity: *Capotondi, Wittenberg, et al. (BAMS, subm. 2014)*
Kug et al. (2010); Chen et al. (in prep); Atwood et al. (in prep)

Reconstructing past variations in ENSO

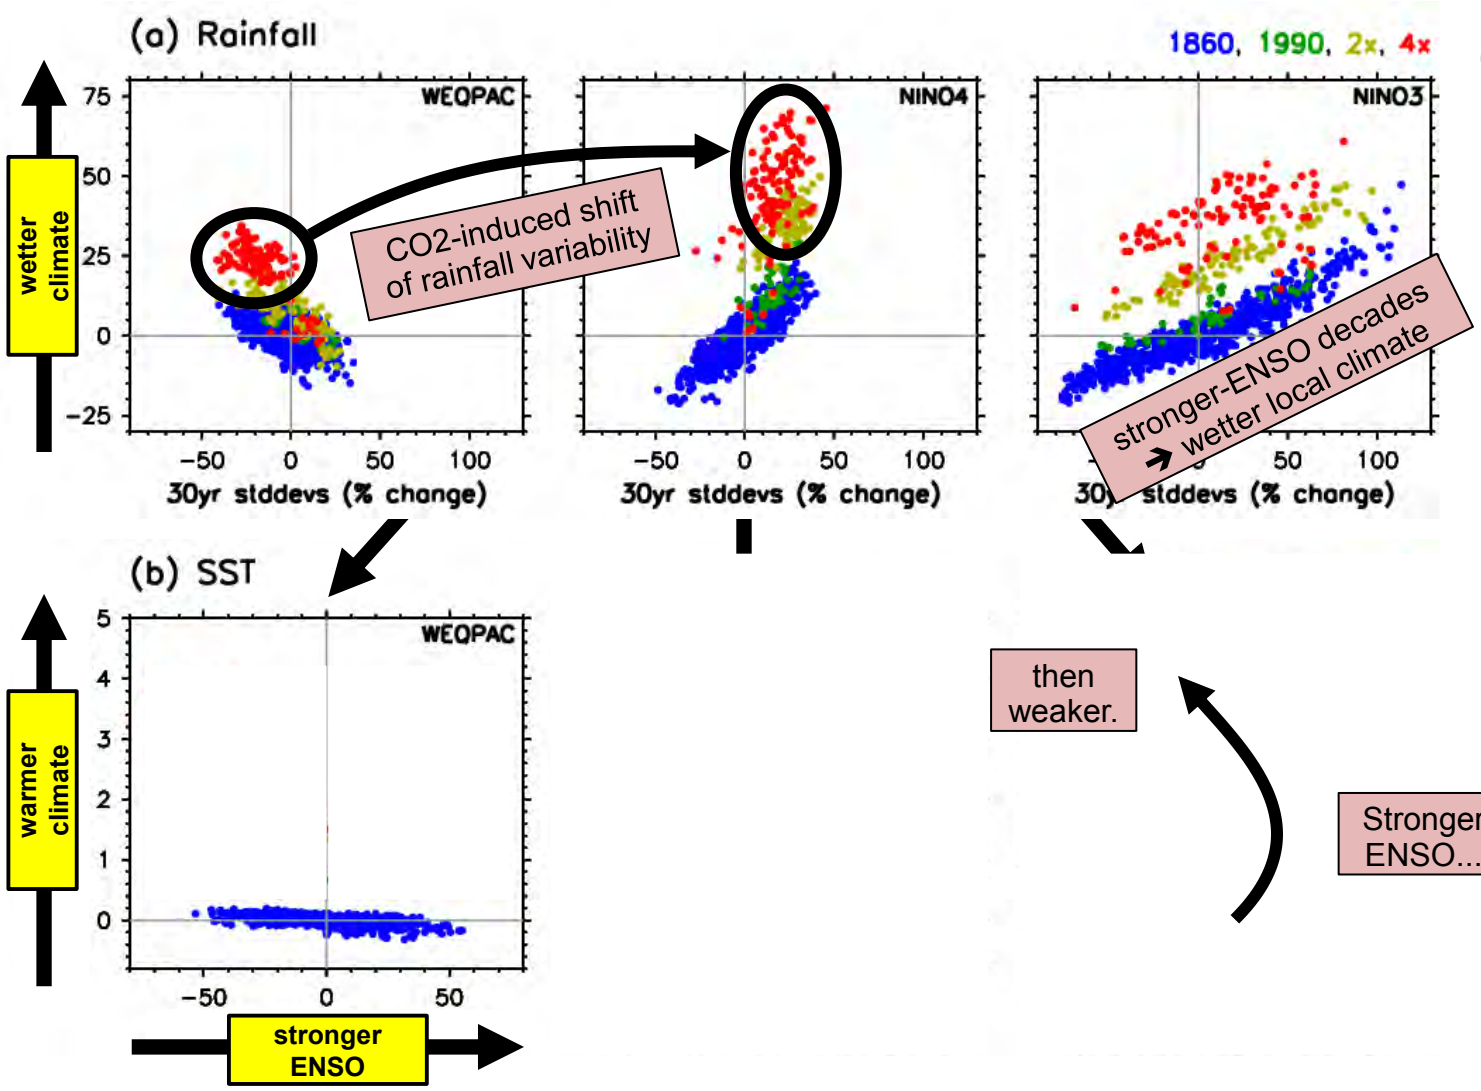
Proxy evidence suggests that ENSO has waxed & waned, with a significant amplification in recent decades.



Multiproxy meta-reconstruction (from corals, tree rings, lake sediments & ice cores) of 30-year running variance of 10-yr lowpass July-June annual-mean NINO3.4 SSTs.

McGregor et al. (Clim. Past, 2013); Emile-Geay et al. (2013ab)

ENSO response to increasing CO_2



CM2.1 simulations show interplay of intrinsic ENSO modulation, decadal variation, and regional responses to increasing CO_2

Vecchi & Wittenberg (2010)

Collins et al. (2010)

Xie et al. (2010)

DiNezio et al. (2012)

Watanabe & Wittenberg (2012)

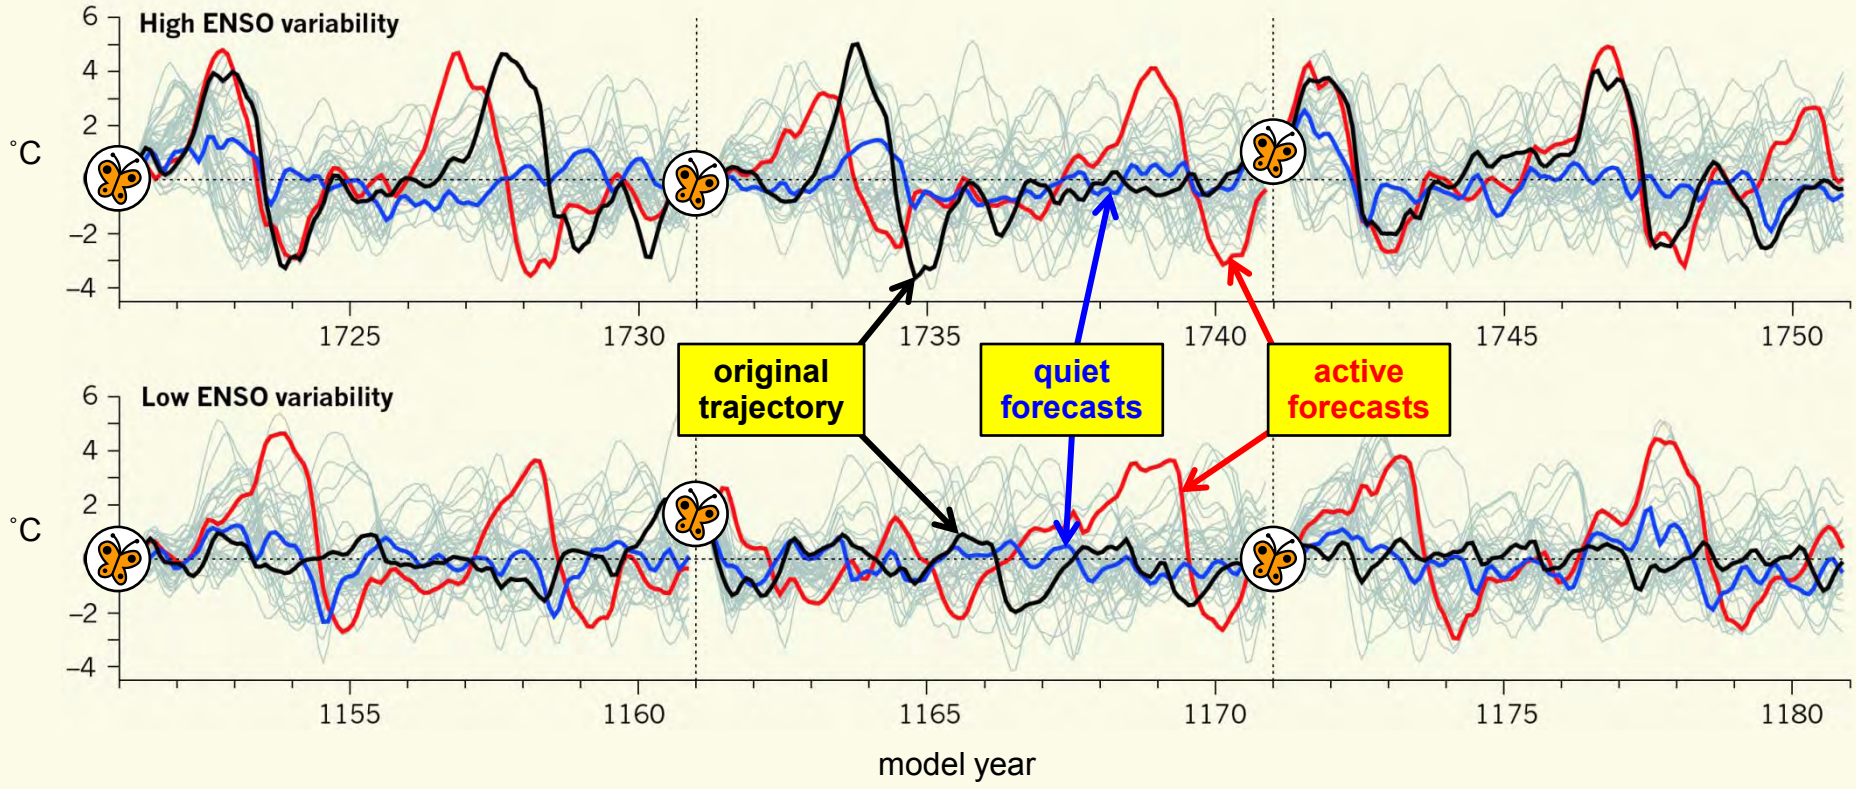
Watanabe et al. (2012)

Ogata et al. (2013)

Cai et al. (2014)

ENSO modulation: Is it decadally predictable?

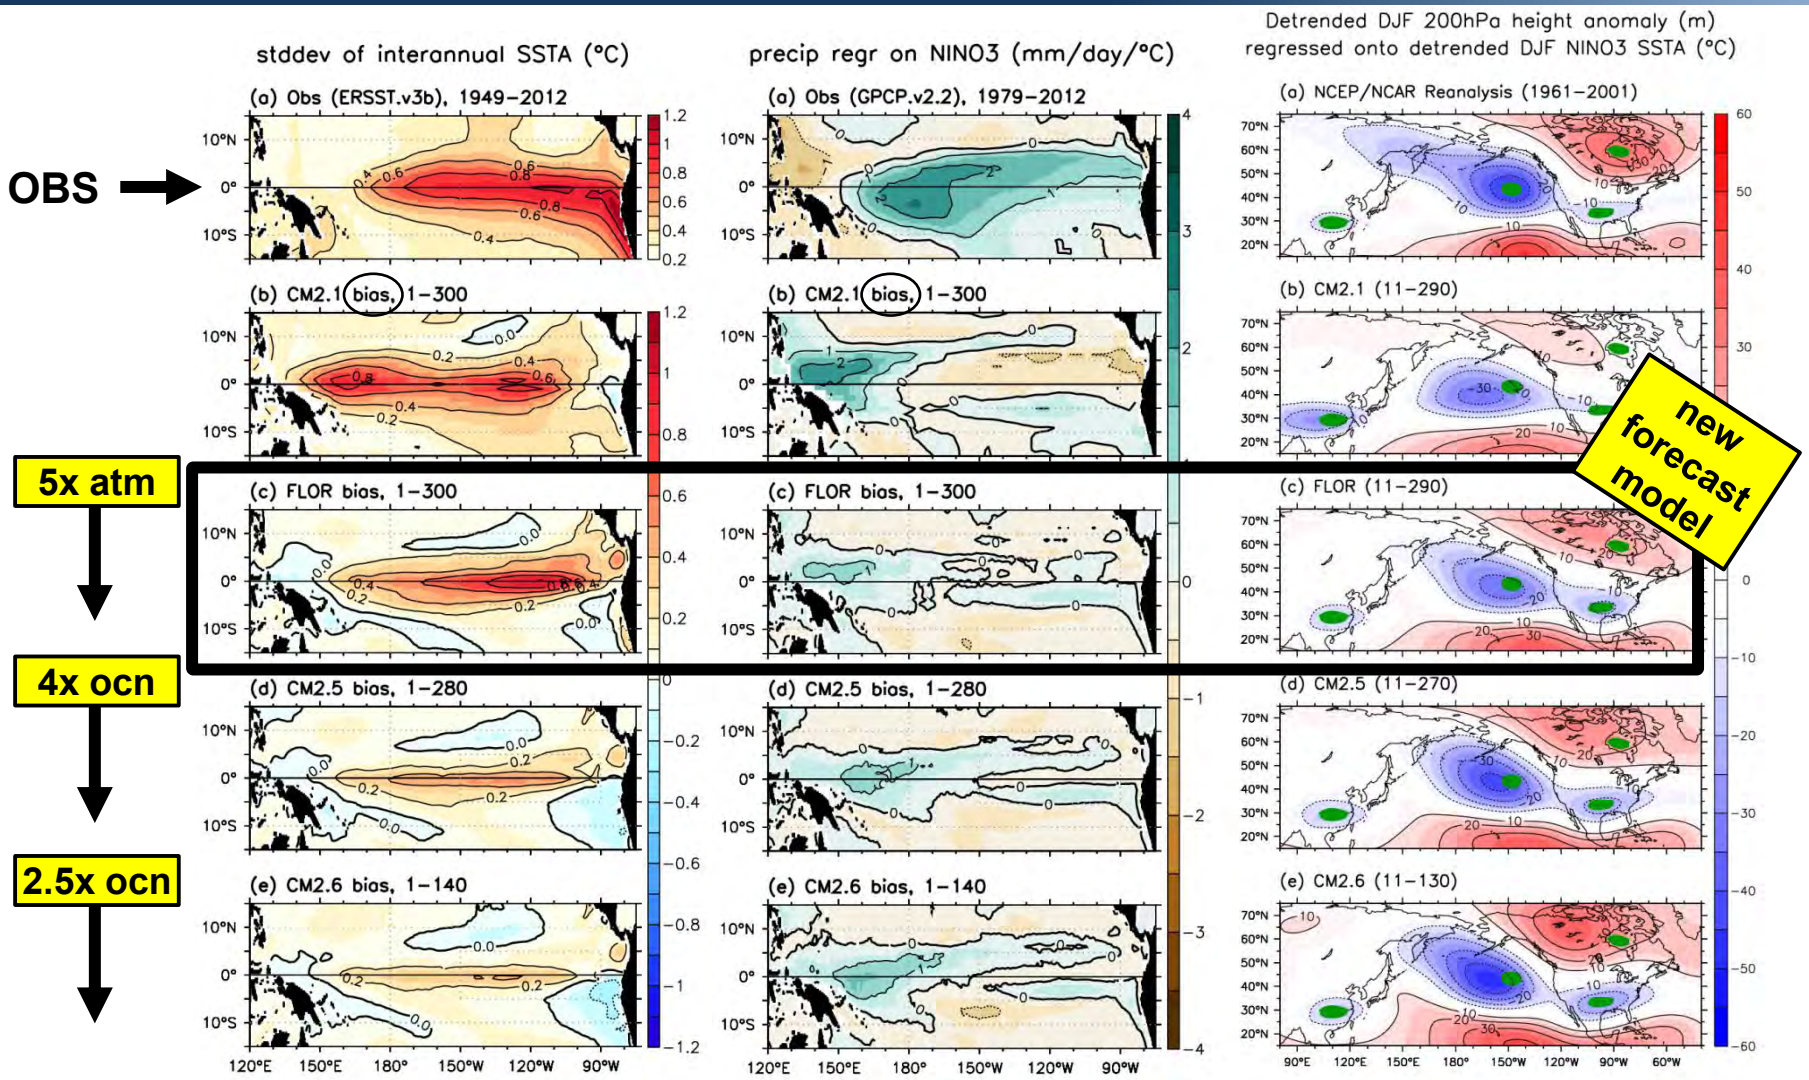
"Perfect-model" forecasts of NINO3 SSTA, for extreme-ENSO epochs simulated by CM2.1



(External forcings **held fixed** at 1860 values.)

Wittenberg et al. (J. Climate, 2014)

ENSO improvements with increasing resolution



Delworth et al. (2012); Jia et al. (subm); Wittenberg et al. (in prep)

ENSO Summary

1. ENSO's future depends on both **intrinsic modulation** and **external forcings**.

2. GFDL's simulations are among the **best in the world**, and improving.

3. GFDL is rapidly **advancing community understanding** of ENSO's diversity, dynamics, sensitivities, and predictability.
