GFDL Core Physical Climate Model Development

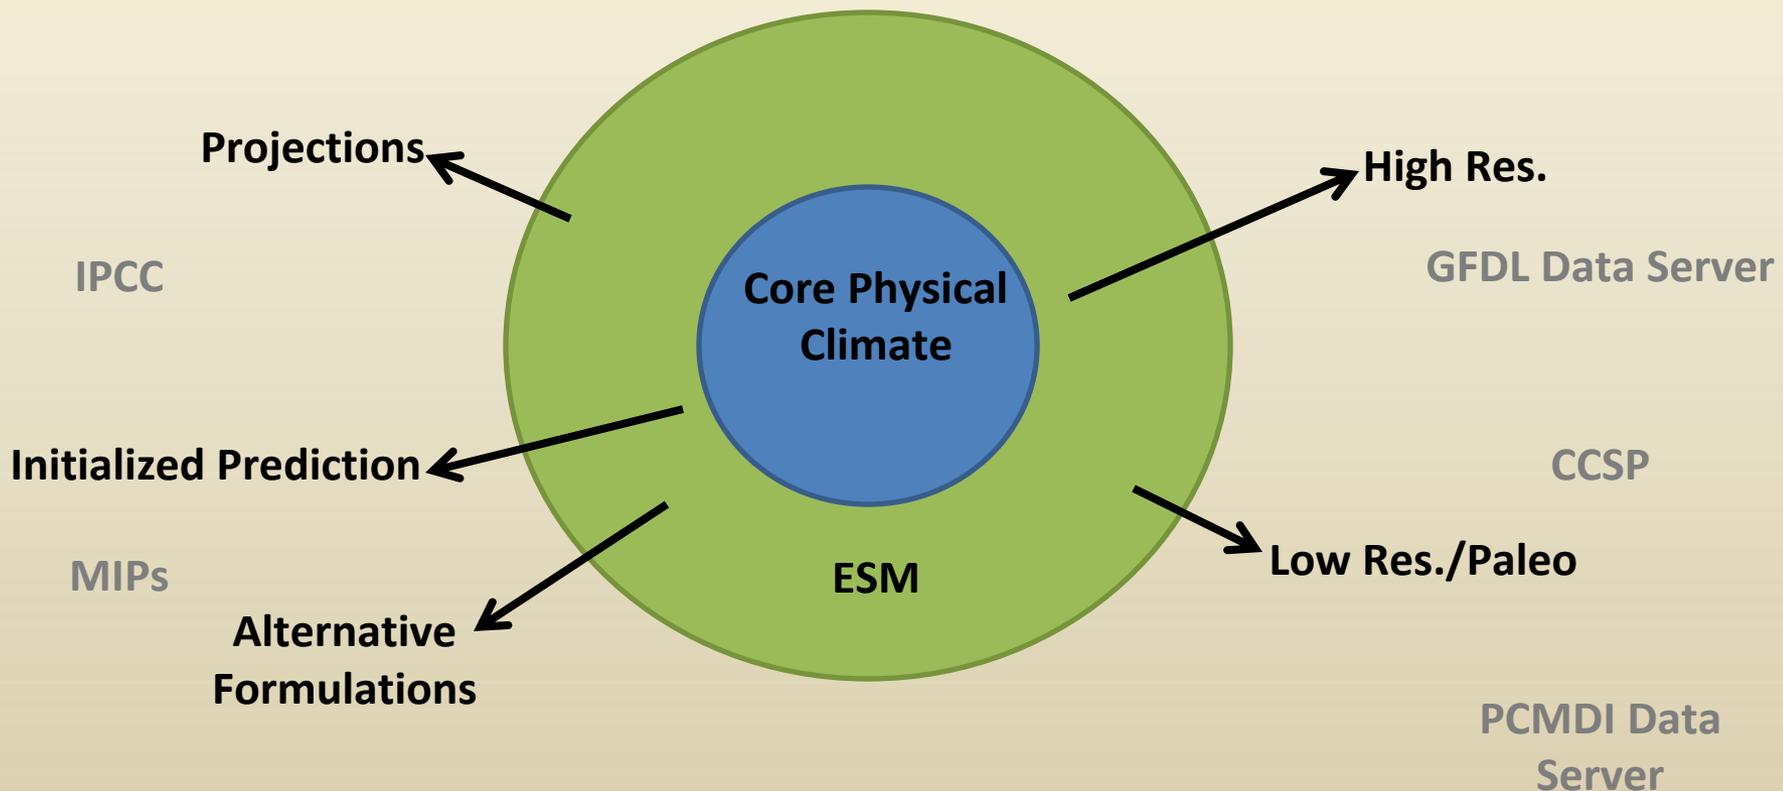

Presented by
Mike Winton

Geophysical Fluid Dynamics Laboratory Review

June 30 - July 2, 2009

GFDL Core Physical Climate Model Development

- 1) Core physical climate model
- 2) CM3/CM2.1 simulation comparison

Past GFDL climate model IPCC contributions

- 1990 “FAR”

Future projections based largely on GFDL model

- 1995 “SAR”

GFDL model one of ~6 models used for future projections

Halloween Report
Oct 2000

- 2001 “TAR”

GFDL model is “2nd tier” out of ~12 models

Valentine Memo
Feb 2006

- 2007 “AR4”

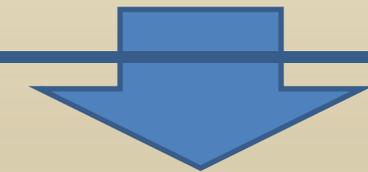

GFDL CM models are two of the best out of ~24 models

- 2013 “AR5”

GFDL CM2.1 based ESMs and decadal prediction,
new “core” model CM3

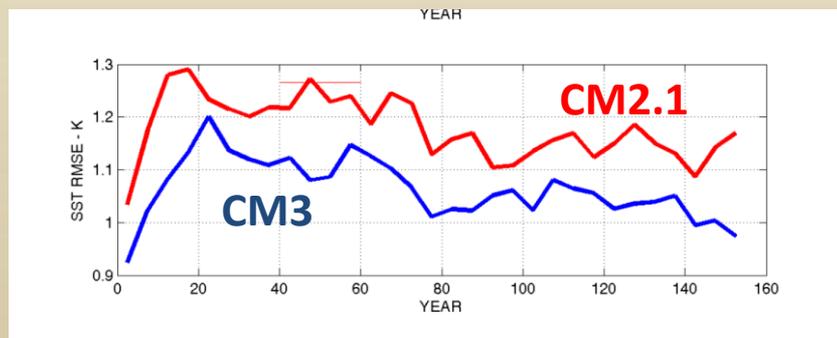

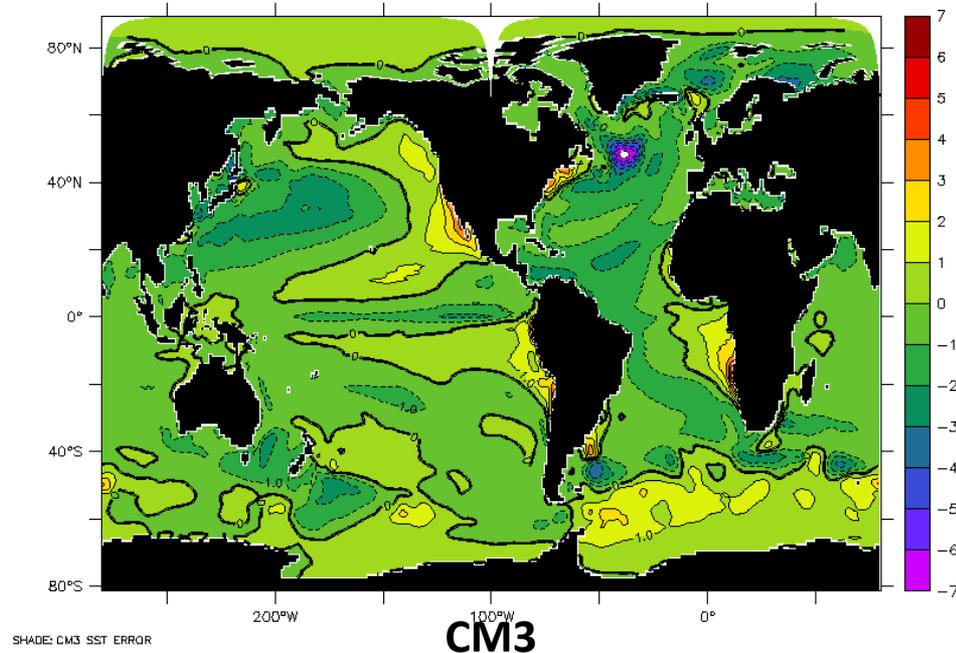

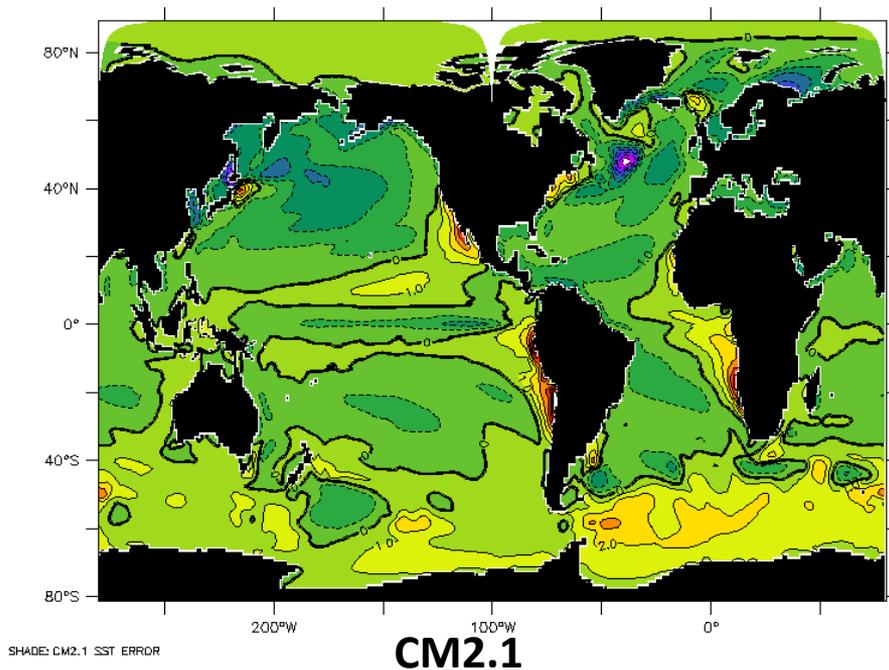

AR5 Coupled Model Formulations

	CM2G	CM2M	CM2.1	CM3
Atmosphere	AM2.1 (L24)	AM2.1 (L24)	AM2.1 (L24)	AM3 (L48)
Land	LM3	LM3	LM2	LM3
Sea ice	SIS	SIS	SIS	SIS
Ocean	GOLD	MOM4p1 "M configuration"	MOM4	MOM4p1 "CM2.1-like"

ESM2G and ESM2M

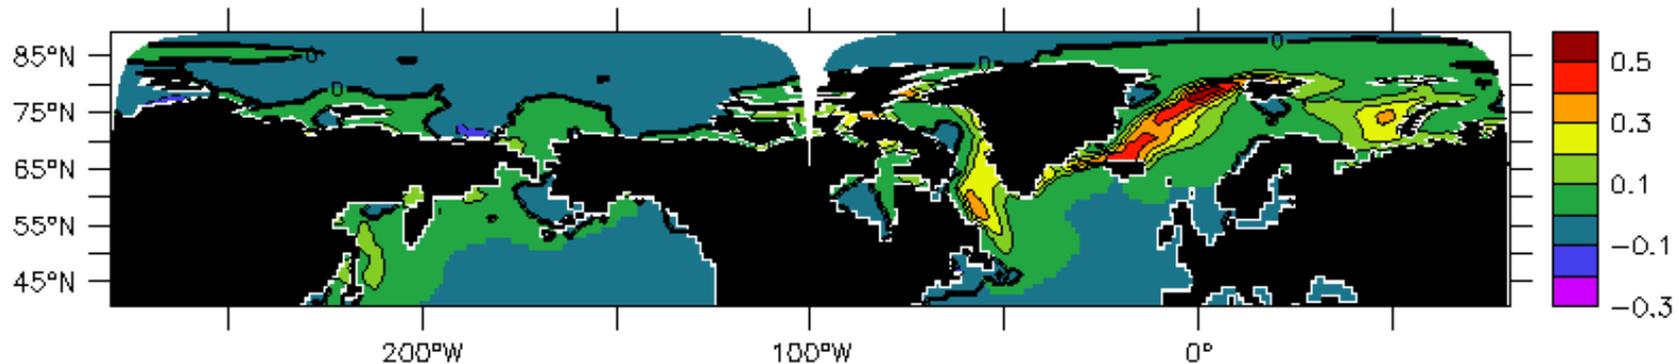

CM3 has reduced SST errors relative to CM2.1

CM3 improvement

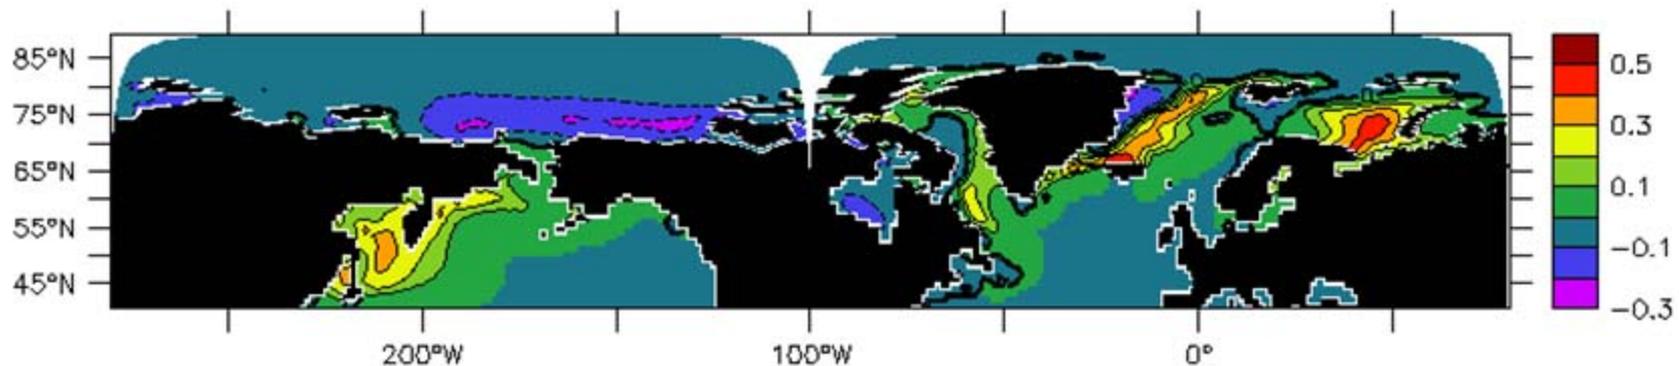

- Southern ocean
- Eastern tropical Pacific
- North Pacific

CM3 has reduced NH sea ice cover error relative to CM2.1

SHADE: CM3 ICE COVER ERROR

CM3

SHADE: CM2 ICE COVER ERROR

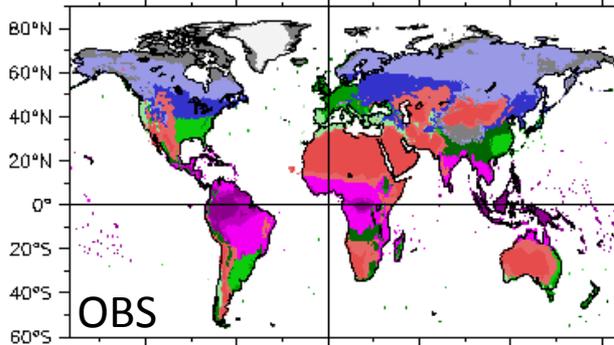

CM2.1

CM3 has reduced Köppen climate errors relative to CM2.1

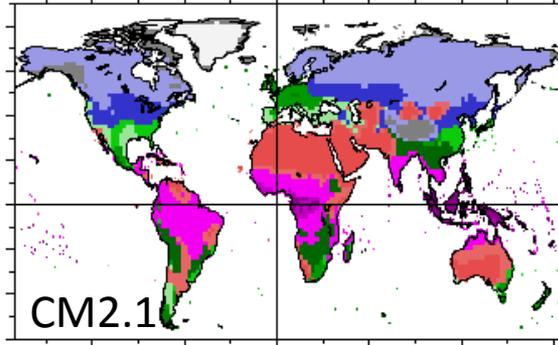

Köppen Climate Types: Global

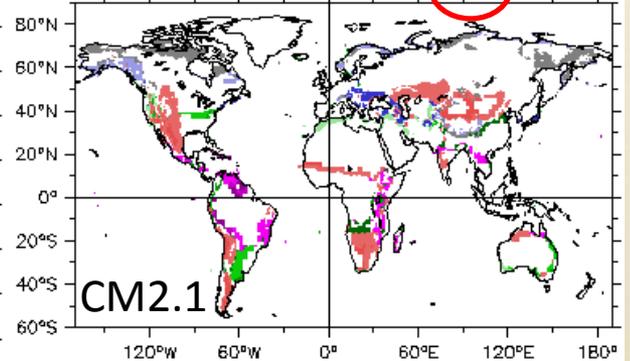

(a) Obs from University of East Anglia (1961–1990)

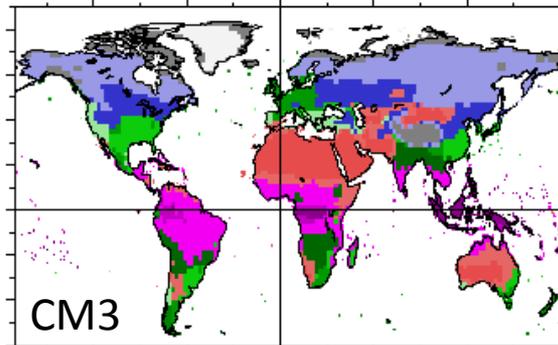

(b) CM2.1U_Control-1990_E1 (0001-0100)

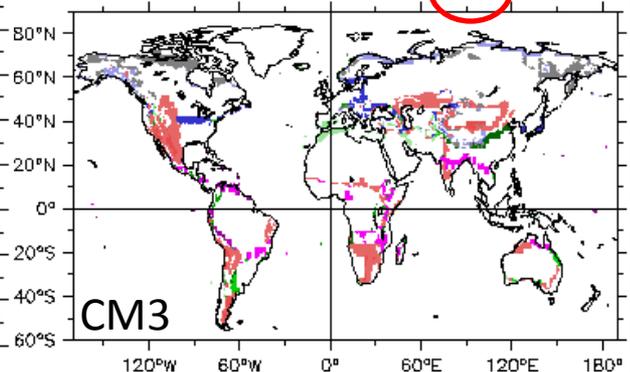

(c) Types of (a) misclassified by (b): 23%

(b) CM3X_Control-1990 (0001-0100)

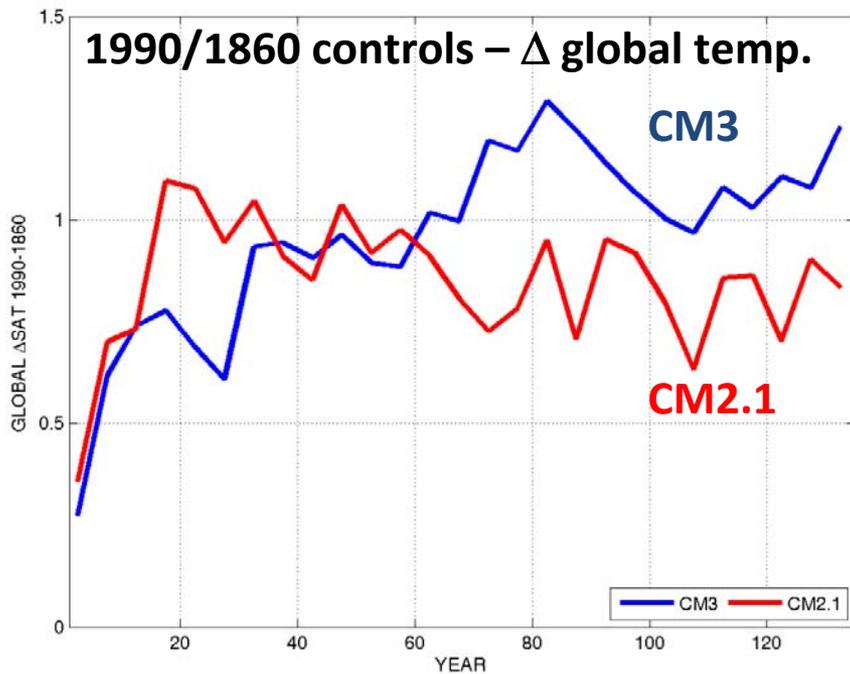

(c) Types of (a) misclassified by (b): 18.9%

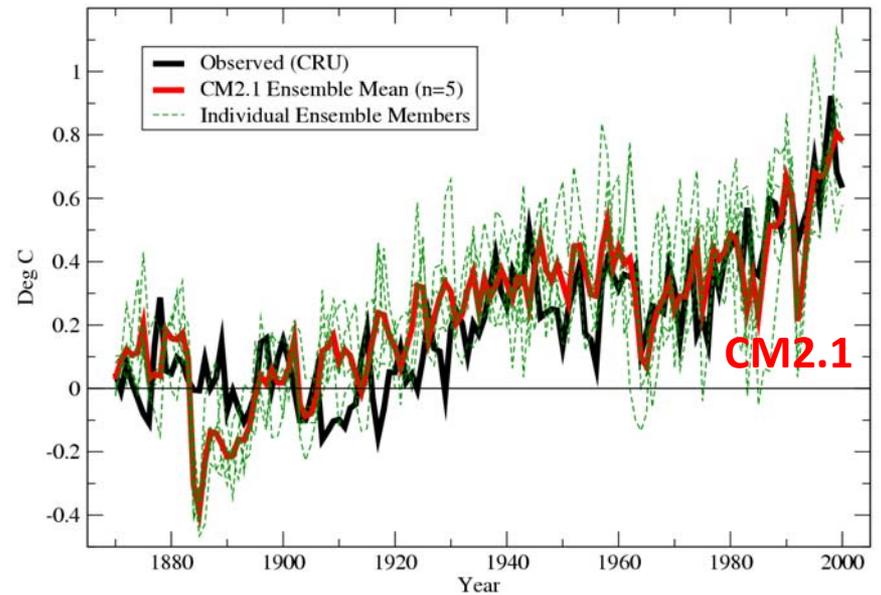

(Gnanadesikan and Stouffer 2006)

CM3 appears on target for the 20th century warming simulation

	$F_{1980-1999}$	TCR	$F*TCR$
CM2.1	1.3 W/m ²	1.5°C	1.95
CM3	~1 W/m ²	2.1°C	2.1

Global Mean Surface Temperature: CM2.1 vs. Observed
 version: scenarios minus long-term trends; combined sst/t_ref; masked; 1881-1920 ref

(Knutson et al 2006)

CM3 vs. CM2.1 Simulation Summary

- **Improved surface climate simulation:**
 - SST's, sea ice, Köppen climates, SAT variability (NH land)
- **Degraded ocean simulation:**
 - SSS, ocean subsurface T & S
- **Interesting difference:**
 - 20th century forcing/climate sensitivity combination
